PROFESSIONAL SUMMARY

I discovered early that I was intrigued by technologies, and how most of the things I enjoyed were related to this field, so I followed a high-school and a university in Computer Science. Graduated "Alexandru Ioan Cuza" University, specializing in Computer Science. Built a foundation in FullStack development and I enjoyed courses like OOP, Python and Web Technologies.

Currently preparing for a Master's in Cyber Security. Beyond coding, I'm teaching Japanese alongside my studies. Aiming for a Junior Software Engineer position using C++, Python, FastAPI and React. Focused on learning and expanding my knowledge in the mentioned areas and long-term growth in FullStack development.

EDUCATION & DEVELOPMENT

Bachelor's Degree | Computer Science

2022 –2025

"Alexandru Ioan Cuza" University

Iasi, Romania

- **Relevant Coursework:** OOP, Python, Web Technologies, Software Engineering
- **Thesis:** "Safe Path": Original FullStack mobile application that provides safety to traveling users with real-time speech threat detection that automatically sends messages to safety contacts.
- **TechStack:** C++, Python, JavaScript, Machine Learning, Unity.

High School | Mathematics-Informatics

2018 –2022

"Mihai Eminescu" College

Suceava, Romania

TECHNICAL SKILLS & COMPETENCIES

- **Languages & Frameworks:** Python, C++, JavaScript, React, React Native, FastAPI
- **Tools & Platforms:** Git, GitHub, Trello,
- **Methodologies:** Agile, Scrum, REST APIs

KEY PROJECTS

"Safe Path"

[Link]

- **Inspiration & Objective:** Similar to location tracking, it uses the surrounding voices to track any danger or uncomfortable situations. Its purpose is to solve the fear or anxiety of traveling alone.
- **Features:** It features speech-to-text recognition, machine learning algorithms based on a score for detecting danger phrases from the given text and an automatic system that sends a message to every chosen contact if it detected a threat.
- **Technology Stack:** Python, FastAPI for a fast responding backend and access to machine learning libraries; JavaScript and React Native for an easy to test and develop mobile application.
- **Challenges:** There was no publicly available database of danger phrases, so I created and implemented my own, which led to an accurate detection algorithm.
- **Conclusion:** Demonstrates originality with a unique idea and adaptability to new concepts.

"MedBuddy"

[Link]

- **Role and context:** As part of the Software Engineering class project, I acted as Scrum Master for a FrontEnd developing team that worked on creating a medical support application. We focused on the login functionality and the admin interface, which includes access to sensitive information and managing the accounts.

- **Technology Stack:** JavaScript and React, focused on making the platform dynamic and responsive, alongside requests following the REST methodology for easy to understand communication.
- **Challenges:** The previous Scrum Master had inefficiently managed our team, so after debating I stepped in as the Scrum Master, and managed to deliver the full application after being 2 weeks behind schedule beforehand.
- **Conclusion:** Demonstrated leadership skills and initiative.

“Boo: Book Reviewer”

[Link]

- **Inspiration and Objective:** FullStack Web application that acts as a friendly hub for book lovers. It features book clubs with posts, a friendship system and a categorized library with a rating system. Beside the user interface, I also implemented the admin one, that can manage the accounts, the groups, the posts and the books.
- **Technology Stack:** JavaScript, PHP, SCSS with no framework as per the course request;
- **Challenges:** The “no framework” rule has required me to do a lot more documentation on foundational technologies.
- **Conclusion:** I really enjoyed developing this project, which motivated me to add extra features and experiment more.

“Charity Ball 2022” Iasi

- **Role and Objective:** As a part of the university volunteering team, I worked with a colleague on developing the FrontEnd for the informative Website of the annual Charity Ball event.
- **Technology Stack:** JavaScript and React for a responsive, well made FrontEnd.
- **Challenges:** Time management. As I was working on this project, I also had to balance the exams at the end of the semester, courses, other projects and the workshop meetings where we created all the decorations.
- **Conclusion:** The end result was a fully deployed Website that was used for the event and its marketing, which ended up having a high participation rate.

PROFESSIONAL EXPERIENCE

Association of Computer Science Students (ASII)

2022 – 2025

Volunteer in IT department

Iasi, Romania

- **Role & Responsibilities:** As a part of the FrontEnd team, I contributed to maintaining existing Web Sites and mobile applications for projects organized by the association such as: “Charity Ball”, “Freshman Ball” and “FII-ITist”.
- **SoftSkills:** Team work in an Agile environment, time management, collaborating through platforms like GitHub and Trello.
- **Experience gained:** Integrated well into a corporate-like environment and met all my deadlines.
- **Tech Stack:** JavaScript, React, Trello, GitHub, Agile.

Silvia Patrascu’s Japanese School

2021 – Present

Japanese Tutor

Iasi, Romania

- **Role & Responsibilities:** Taught Japanese to small groups and one-on-one students.
- **SoftSkills:** Developed strong organizational skills, adapted teaching methods to different learning styles.

ADDITIONAL INFORMATION

- **Languages:** English (Advanced), Romanian (Native), Japanese (Elementary).
- **Certifications:** JLPT Japanese-Language Proficiency Test N5 | 2022
